Employment in rural and small town areas

- A. Key findings
- **B.** Introduction -- COVID-19 timeline
- C. <u>Definitions</u>
- D. Choosing a benchmark or baseline
- E. COVID-19 impact: change compared to the same month in the previous year
 - a. Gap in number employed: Canada overall
 - b. Gap in number employed: By industry sector
 - c. Gap in percent employed: Canada overall
 - d. Gap in percent employed: By industry sector
 - e. Gap in percent employed: By province
 - f. Gap by percent employed: By sex
 - g. Gap by percent employed: By age
 - h. Gap by age and sex (Is there an RST SHE-cession?)

F. Context

- a. Recent employment trends by industry
- b. Recent month-to-month change
- c. <u>Demographic context</u>
- d. Size of rural economy
- e. Other notes

Key findings:

Trends and change in employment in

LUC: Larger urban centres and RST: Rural and small town areas

- The COVID-19 impact, or gap (relative to the level of employment in the same month in 2019) has been lessening in each month since April. The RST job gap in September, 2020 was -162 thousand jobs and the LUC job gap is -522 thousand jobs.
- These job gaps were -6.2% in RST and -3.2% in LUC (as a percent of employment in September, 2019).
- In RST areas in September, 2020, the four industry sectors with the largest COVID-19 impact (or gap) on the number employed, relative to September, 2019, were:
 - 29 thousand jobs: forestry, fishing, mining, oil and gas
 - 19 thousand jobs: construction
 - 18 thousand jobs: health care and social assistance
 - 15 thousand jobs: manufacturing
- In RST areas in September, 2020, the industry sectors with the largest PERCENT difference in employment, compared to September, 2019, were:
 - 25.1% : forestry, fishing, mining, oil and gas*
 - 16.1%: business, building and other support services
 - 11.2%: information, culture and recreation
 - 9.0%: transportation and warehousing

(* FFMOG was experiencing employment declines before COVID-19)

- In September, 2020, the three provinces with the largest RST COVID-19 impact or gap in terms of the PERCENT difference in employment, compared to September, 2019, were:
 - 19.3% : Alberta
 - 10.9% : Quebec
 - 9.4% : Saskatchewan
 - 7.0% : British Columbia
- In September, 2020, the COVID-19 impact was somewhat larger in RST areas for both females and males, compared to the impact in LUC areas.
- In September, 2020, the RST gap, compared to the LUC gap, was greater for individuals 25 to 64 years of age, but less for individuals 15-24 and 65+ years of age
- Our measure of the gap shows a "SHE-cession" within RST areas only for females 55+ years of age.

Introduction -- COVID-19 timeline

Dec. 31, 2019: China informs the World Health Organization (WHO) of a cluster of 41 patients with a mysterious pneumonia.

Jan. 23, 2020:The city of Wuhan is placed under quarantine and a few days later, so is the entire province of Hubei.

Mar. 11, 2020: The WHO declares a pandemic; the global confirmed case count is 126,000.

Mar. 12 (Quebec) to Mar. 22 (Nova Scotia), every Canadian province and territory had declared a state of emergency, with gradually tightening restrictions.

Mar.15-21: Enumeration of March employment levels for the Labour Force Survey. Much of the impact of COVID-19 appeared in the March data

Mar. 21: U.S.-Canada border officially closes to non-essential travel

Apr. 12-18: Enumeration of April employment levels for the Labour Force Survey. The full impact of the impact of COVID-19 appeared in the April data.

May 17-26: Enumeration of May employment levels for Labour Force Survey. Only a few establishments in a few provinces had re-opened by this time

THUS: COVID-19 impact on data enumerated by the LFS

- Feb 2020 LFS: employment was still in the state of the "old" normal
- Mar 2020 LFS: the bulk of the COVID-19 shutdown had occurred
- Apr 2020 LFS: the complete impact of COVID-19
- May 2020 LFS: a few scattered re-openings were occurring
- Jun 2020 LFS: many (albeit partial) re-openings in many provinces
- Jul 2020 LFS: wider (again partial) re-openings in most provinces
- Aug 2020 & and Sep 2020 LFS: wide, but not universal re-openings (but often restricted seating in restaurants, etc.)

Definitions

Labour Force Survey (LFS)

- 1. Data on employment from the monthly LFS during the third week of September, 2020 was published on October 9, 2020.
- 2. Number employed: Number of persons who, during the reference week, worked for pay or profit, or performed unpaid family work or had a job but were not at work due to own illness or disability, personal or family responsibilities, labour dispute, vacation, or other reason. Those persons on layoff and persons without work but who had a job to start at a definite date in the future are not considered employed. Estimates in thousands, rounded to the nearest hundred.
- 3. The LFS rotates 1/6 of its sample every month. The data for the first month is typically collected via a face-to-face household interview but, for March, 2020, this was changed to a telephone (or maybe Internet) data collection approach.
- 4. Rural and small town areas are defined in the next slide.

Larger urban centres (LUCs) include Census Metropolitan Areas (CMAs) with a total population 100,000 or more (with at least 50,000 in the urban core) and Census Agglomerations with a population of 10,000 to 99,999 and both include residents of neighbouring towns and municipalities where 50+% of employed residents commute to the CMA or CA.

Rural & small town (RST) individuals reside outside a CMA or CA.

The current LFS data are published using the 2011 delineation of CMAs and CAs. The CMAs are listed on the next slide and the CAs are listed on the slide that follows the slide with the list of CMAs.

(Note that CAs with a total population of 100,000 or more are not classified as CMAs because they have fewer than 50,000 residents in the core.)

Duovinas	Metro areas (CMAs) within	Population in	Population in	Population in
Province	each province	2006 Census	2011 Census	2016 Census

	Abbotsford-Mission	159,020	170,191	180,518

Metro refers to Census
Metropolitan Areas
(CMAs) which have a total
population 100,000 or
more (with at least 50,000
in the urban core) and
includes all neighbouring
towns and municipalities
where 50+% of employed
residents commute to the
CMA.

Non-metro refers to individuals who live outside a CMA.

The current LFS data is based on the 2011 delineation of CMAs.

Choosing a benchmark or baseline

- 1. The impact of COVID-19 on employment may be shown in various ways.
- 2. Our calculation starts with the published level of employment in the COVID-19 era which started in March, 2020.
- 3. Then, we need to choose a benchmark or baseline (or an approximate or expected "normal") in order to indicate the size of the impact of COVID-19 on employment.
- 4. My previous charts of LFS results for March, April and May, 2020 used:
 - a. the change from February, 2020 and
 - b. the change from the average of the same month for the previous three years.
- 5. In an accompanying document*, I note that method (a) suggests a "too" small RST calculated COVID-19 impact because the benchmark (February 2020) is lower than for the following months due to seasonality causing a lower RST level of employment in Jan/Feb/Mar and method (b) suggests a "too" high RST calculated impact of COVID-19 because the benchmark is too high as RST employment has been declining over time (and LUC employment has been increasing over time).
- 6. The results show that the COVID-19 impact in RST is less than in LUC using method (a) and the impact in RST is larger than in LUC when using method (b).
- 7. Hence, in the following charts, we use the **same month last year** as our benchmark. Interestingly, at the Canada level, this method shows the COVID-19 impact on employment is essentially the same in RST areas and in LUCs. Thus, some obvious bias has been removed <u>and</u> we will be living with noisy monthly estimates which will be noticeable for estimates of employment in smaller sectors and in smaller provinces.

^{*} Bollman, Ray D. (2020) Estimating the impact of COVID-19 on employment: Considerations in the choice of a baseline, July 10.

COVID-19 Impact:

Gap in number employed: Canada overall compared to same month in previous year

in LUC: Larger urban centres and RST: Rural and small town areas

- Change in number employed (,000):
 - Mar 2019 to Mar 2020 in LUC = -703
 - Apr 2019 to Apr 2020 in LUC = -2,436
 - May 2019 to May 2020 in LUC = -2,245
 - Jun 2019 to Jun 2020 in LUC = -1,374
 - Jul 2019 to Jul 2020 in LUC = -997
 - Aug 2019 to Aug 2020 in LUC = -824
 - Sep 2019 to Sep 2020 in LUC = -522
 - Mar 2019 to Mar 2020 in RST = -105
 - Apr 2019 to Apr 2020 in RST = -405
 - May 2019 to May 2020 in RST = -362
 - Jun 2019 to Jun 2020 in RST = -241
 - Jul 2019 to Jul 2020 in RST = -217
 - Aug 2019 to Aug 2020 in RST = -204
 - Sep 2019 to Sep 2020 in RST = -162
- Thus, the COVID-19 impact, or gap (relative to the level of employment in the same month in 2019) has been lessening in each month since April.
- Details of number employed by industry sector are in slides 13-14-15, details on percent change in number employed by industry sector are in slides 35-36-37, details by province are in slide 51 and details by age and sex are in slide 66.

COVID-19 Impact:

Gap in number employed: By industry sector compared to same month in previous year

in

LUC: Larger urban centres and RST: Rural and small town areas

In RST areas in September, 2020, the four industry sectors with the largest COVID-19 impact (or gap) on the number employed, relative to September, 2019, were:

- 29 thousand jobs: forestry, fishing, mining, oil and gas
- 19 thousand jobs: construction
- 18 thousand jobs: health care and social assistance
- 15 thousand jobs: manufacturing

Which sector in rural and small town (RST²) areas experienced the largest job loss in September, 2020, compared to September, 2019, Canada

^{1.} For examples of the types of businesses classified to each industry sector, see Statistics Canada. (2017) North American Industry Classification System: 2017 (Ottawa: Statistics Canada, Catalogue no. 12-501) (http://www5.statcan.gc.ca/olc-cel/olc.action?objld=12-501-X&objType=2&lang=en&limit=0).

Source: Statistics Canada. Labour Force Survey, Table 14-10-0107-01.

^{2.} Larger urban centres (LUCs) include Census Metropolitan Areas (CMAs) with a total population 100,000 or more (with at least 50,000 in the urban core) and Census Agglomerations with a population of 10,000 to 99,999 and both include residents of neighbouring towns and municipalities where 50+% of employed residents commute to the CMA or CA. Rural & small town (RST) individuals reside outside a CMA or CA.

COVID-19 Impact:

Gap in PERCENT employed: By industry sector compared to same month in previous year in

LUC: Larger urban centres and RST: Rural and small town areas

- In RST areas in September, 2020, the industry sectors with the largest PERCENT difference in employment, compared to September, 2019, were:
 - 25.1% : forestry, fishing, mining, oil and gas*
 - 16.1%: business, building and other support services
 - 11.2%: information, culture and recreation
 - 9.0%: transportation and warehousing
- * The forestry, fishing, mining, oil and gas sector experienced employment declines before the arrival of COVID-19. See the monthly data in the section below entitled:
 - "F. Context: (a) Recent employment trends by industry."
- Details of number employed by industry sector are in slides 13-14-15, details on percent change in number employed by industry sector are in slides 35-36-37, details by province are in slide 51 and details by age and sex are in slide 66.

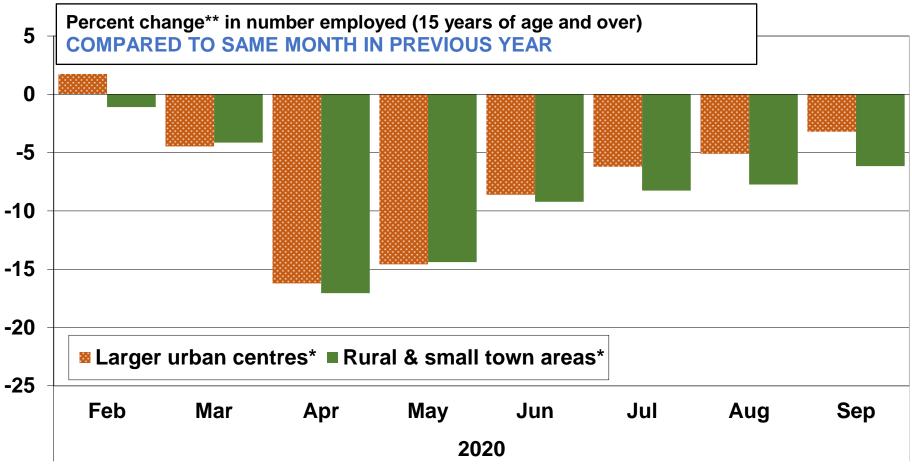

Which sector in rural and small town (RST²) areas experienced the largest PERCENT job loss in September, 2020, compared to September, 2019, Canada

^{1.} For examples of the types of businesses classified to each industry sector, see Statistics Canada. (2017) North American Industry Classification System: 2017 (Ottawa: Statistics Canada, Catalogue no. 12-501) (http://www5.statcan.gc.ca/olc-cel/olc.action?objld=12-501-X&objType=2&lang=en&limit=0).

^{2.} Larger urban centres (LUCs) include Census Metropolitan Areas (CMAs) with a total population 100,000 or more (with at least 50,000 in the urban core) and Census Agglomerations with a population of 10,000 to 99,999 and both include residents of neighbouring towns and municipalities where 50+% of employed residents commute to the CMA or CA. Rural & small town (RST) individuals reside outside a CMA or CA.

All industry sectors

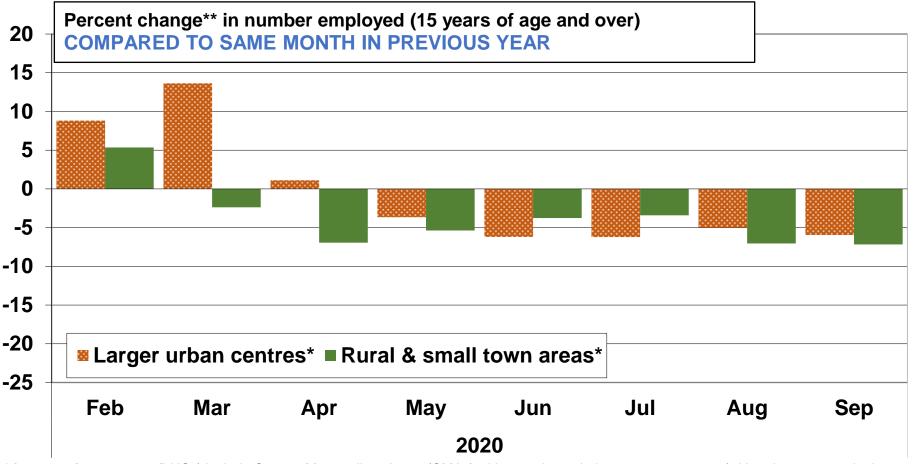

^{*} Larger urban centres (LUCs) include Census Metropolitan Areas (CMAs) with a total population 100,000 or more (with at least 50,000 in the urban core) and Census Agglomerations with a population of 10,000 to 99,999 and both include residents of neighbouring towns and municipalities where 50+% of employed residents commute to the CMA or CA.

^{*} Rural & small town (RST) individuals reside outside a CMA or CA.

^{**} Percent change is calculated as the difference in the longarithm of employment, times 100. Source: Statistics Canada. Labour Force Survey. Table 14-10-0107-01.

Agriculture

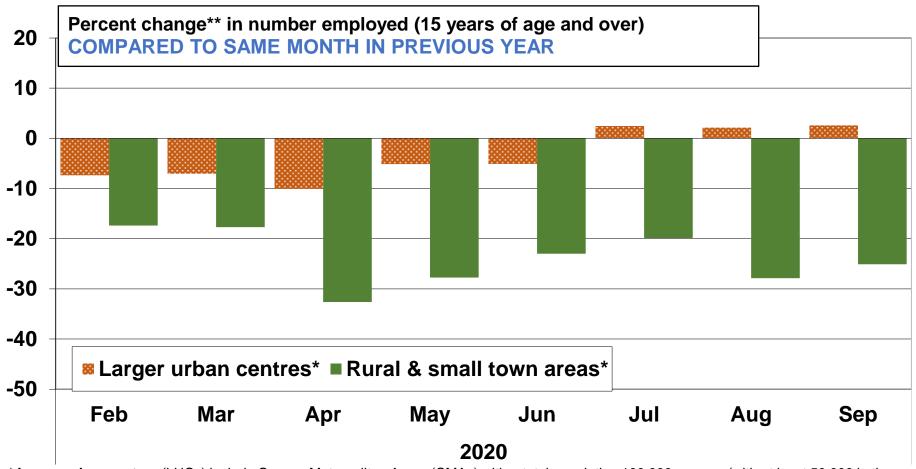

^{*} Larger urban centres (LUCs) include Census Metropolitan Areas (CMAs) with a total population 100,000 or more (with at least 50,000 in the urban core) and Census Agglomerations with a population of 10,000 to 99,999 and both include residents of neighbouring towns and municipalities where 50+% of employed residents commute to the CMA or CA.

^{*} Rural & small town (RST) individuals reside outside a CMA or CA.

^{**} Percent change is calculated as the difference in the longarithm of employment, times 100. Source: Statistics Canada. Labour Force Survey. Table 14-10-0107-01.

Forestry, fishing, mining, oil and gas

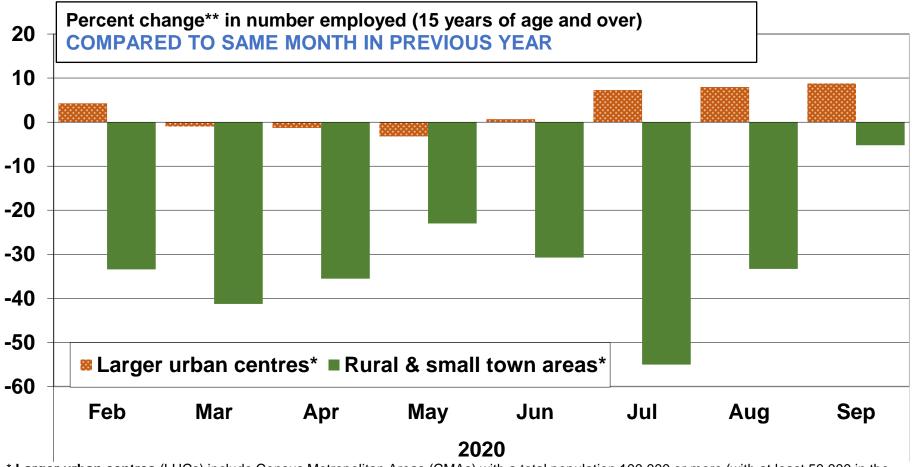

^{*} Larger urban centres (LUCs) include Census Metropolitan Areas (CMAs) with a total population 100,000 or more (with at least 50,000 in the urban core) and Census Agglomerations with a population of 10,000 to 99,999 and both include residents of neighbouring towns and municipalities where 50+% of employed residents commute to the CMA or CA.

^{*} Rural & small town (RST) individuals reside outside a CMA or CA.

^{**} Percent change is calculated as the difference in the longarithm of employment, times 100. Source: Statistics Canada. Labour Force Survey. Table 14-10-0107-01.

Utilities

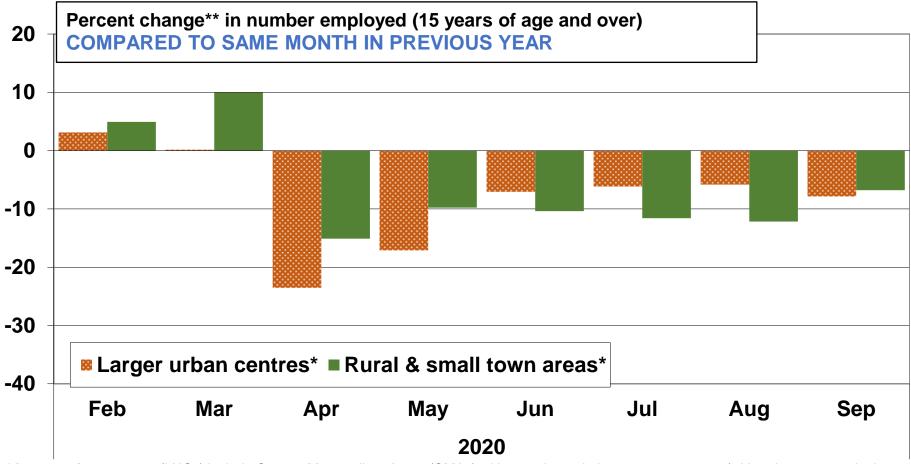

^{*} Larger urban centres (LUCs) include Census Metropolitan Areas (CMAs) with a total population 100,000 or more (with at least 50,000 in the urban core) and Census Agglomerations with a population of 10,000 to 99,999 and both include residents of neighbouring towns and municipalities where 50+% of employed residents commute to the CMA or CA.

^{*} Rural & small town (RST) individuals reside outside a CMA or CA.

^{**} Percent change is calculated as the difference in the longarithm of employment, times 100. Source: Statistics Canada. Labour Force Survey. Table 14-10-0107-01.

Construction

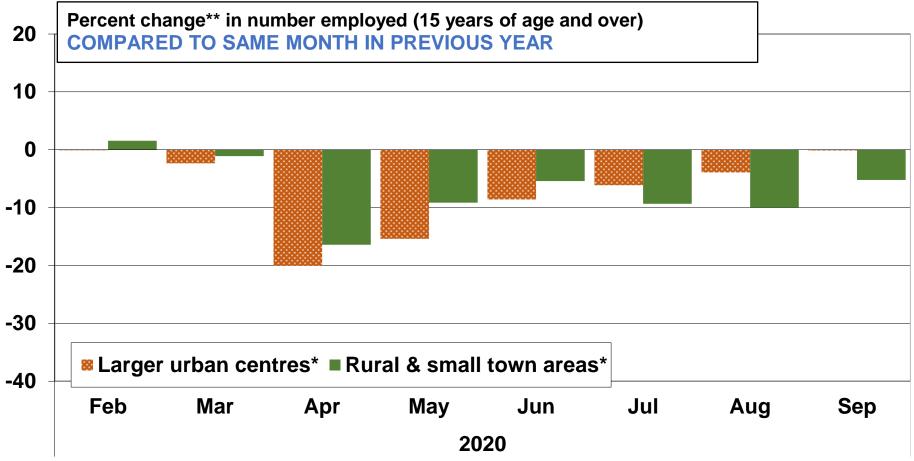

^{*} Larger urban centres (LUCs) include Census Metropolitan Areas (CMAs) with a total population 100,000 or more (with at least 50,000 in the urban core) and Census Agglomerations with a population of 10,000 to 99,999 and both include residents of neighbouring towns and municipalities where 50+% of employed residents commute to the CMA or CA.

^{*} Rural & small town (RST) individuals reside outside a CMA or CA.

^{**} Percent change is calculated as the difference in the longarithm of employment, times 100. Source: Statistics Canada. Labour Force Survey. Table 14-10-0107-01.

Manufacturing

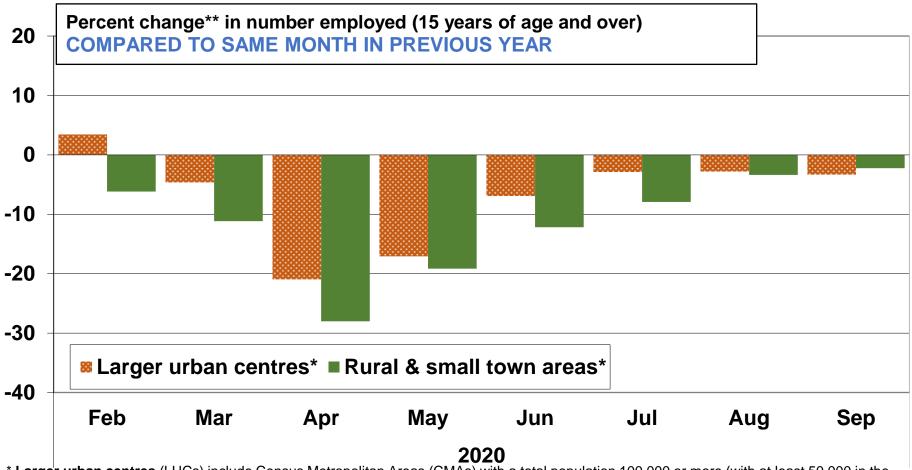

^{*} Larger urban centres (LUCs) include Census Metropolitan Areas (CMAs) with a total population 100,000 or more (with at least 50,000 in the urban core) and Census Agglomerations with a population of 10,000 to 99,999 and both include residents of neighbouring towns and municipalities where 50+% of employed residents commute to the CMA or CA.

^{*} Rural & small town (RST) individuals reside outside a CMA or CA.

^{**} Percent change is calculated as the difference in the longarithm of employment, times 100. Source: Statistics Canada. Labour Force Survey. Table 14-10-0107-01.

Retail and wholesale trade

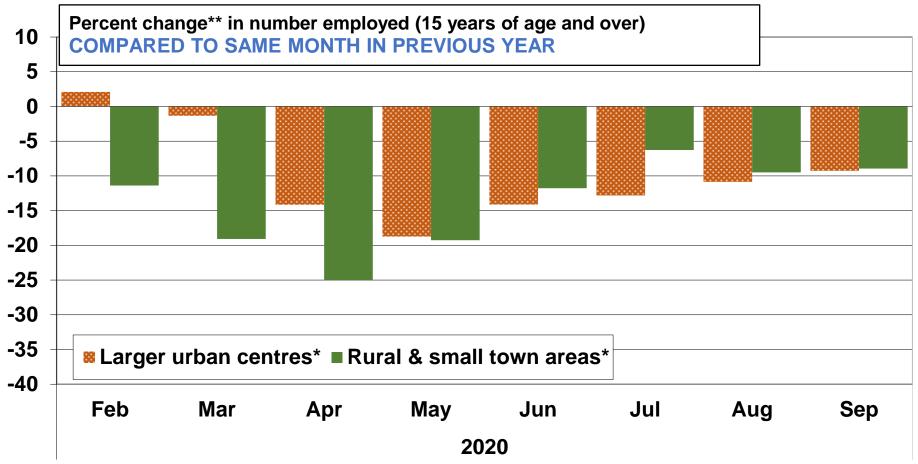

^{*} Larger urban centres (LUCs) include Census Metropolitan Areas (CMAs) with a total population 100,000 or more (with at least 50,000 in the urban core) and Census Agglomerations with a population of 10,000 to 99,999 and both include residents of neighbouring towns and municipalities where 50+% of employed residents commute to the CMA or CA.

^{*} Rural & small town (RST) individuals reside outside a CMA or CA.

^{**} Percent change is calculated as the difference in the longarithm of employment, times 100. Source: Statistics Canada. Labour Force Survey. Table 14-10-0107-01.

Transportation and warehousing

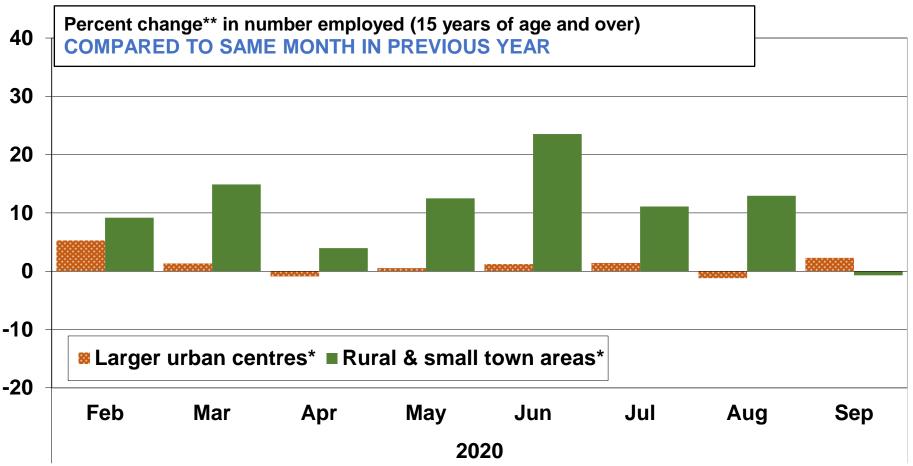

^{*} Larger urban centres (LUCs) include Census Metropolitan Areas (CMAs) with a total population 100,000 or more (with at least 50,000 in the urban core) and Census Agglomerations with a population of 10,000 to 99,999 and both include residents of neighbouring towns and municipalities where 50+% of employed residents commute to the CMA or CA.

^{*} Rural & small town (RST) individuals reside outside a CMA or CA.

^{**} Percent change is calculated as the difference in the longarithm of employment, times 100. Source: Statistics Canada. Labour Force Survey. Table 14-10-0107-01.

Finance, insurance, real estate and leasing

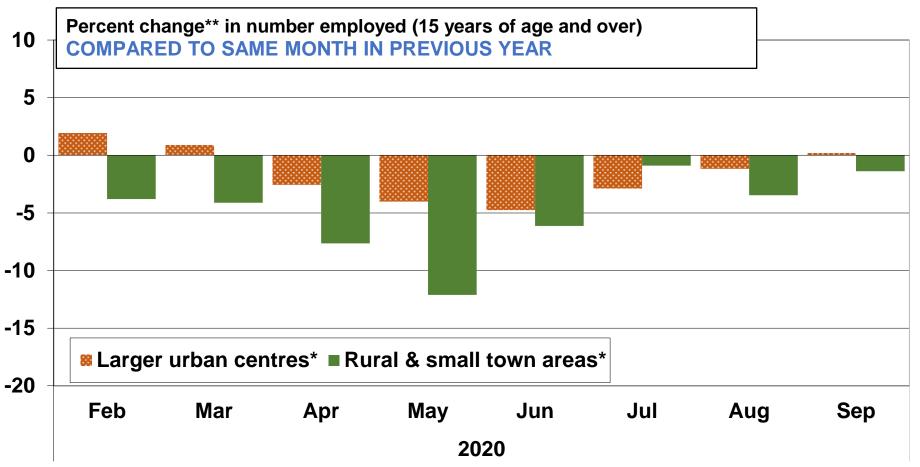

^{*} Larger urban centres (LUCs) include Census Metropolitan Areas (CMAs) with a total population 100,000 or more (with at least 50,000 in the urban core) and Census Agglomerations with a population of 10,000 to 99,999 and both include residents of neighbouring towns and municipalities where 50+% of employed residents commute to the CMA or CA.

^{*} Rural & small town (RST) individuals reside outside a CMA or CA.

^{**} Percent change is calculated as the difference in the longarithm of employment, times 100. Source: Statistics Canada. Labour Force Survey. Table 14-10-0107-01.

Professional, scientific and technical services

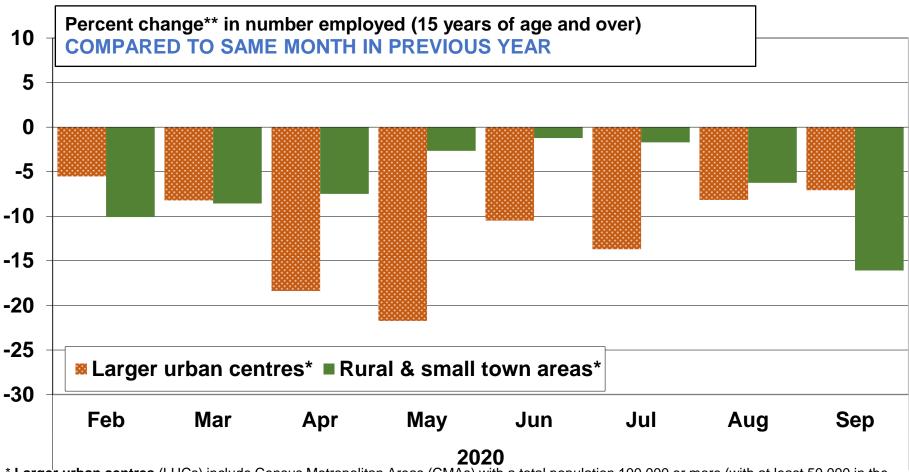

^{*} Larger urban centres (LUCs) include Census Metropolitan Areas (CMAs) with a total population 100,000 or more (with at least 50,000 in the urban core) and Census Agglomerations with a population of 10,000 to 99,999 and both include residents of neighbouring towns and municipalities where 50+% of employed residents commute to the CMA or CA.

^{*} Rural & small town (RST) individuals reside outside a CMA or CA.

^{**} Percent change is calculated as the difference in the longarithm of employment, times 100. Source: Statistics Canada. Labour Force Survey. Table 14-10-0107-01.

Business, building and other support services

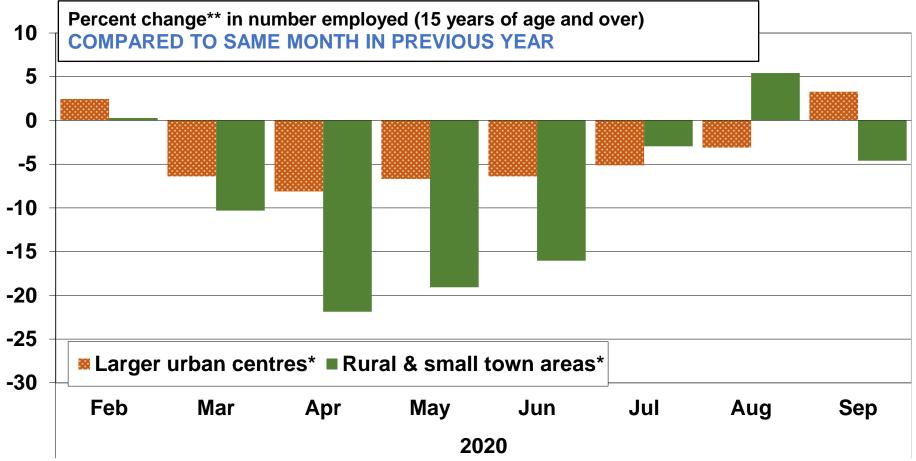

^{*} Larger urban centres (LUCs) include Census Metropolitan Areas (CMAs) with a total population 100,000 or more (with at least 50,000 in the urban core) and Census Agglomerations with a population of 10,000 to 99,999 and both include residents of neighbouring towns and municipalities where 50+% of employed residents commute to the CMA or CA.

^{*} Rural & small town (RST) individuals reside outside a CMA or CA.

^{**} Percent change is calculated as the difference in the longarithm of employment, times 100. Source: Statistics Canada. Labour Force Survey. Table 14-10-0107-01.

Educational services

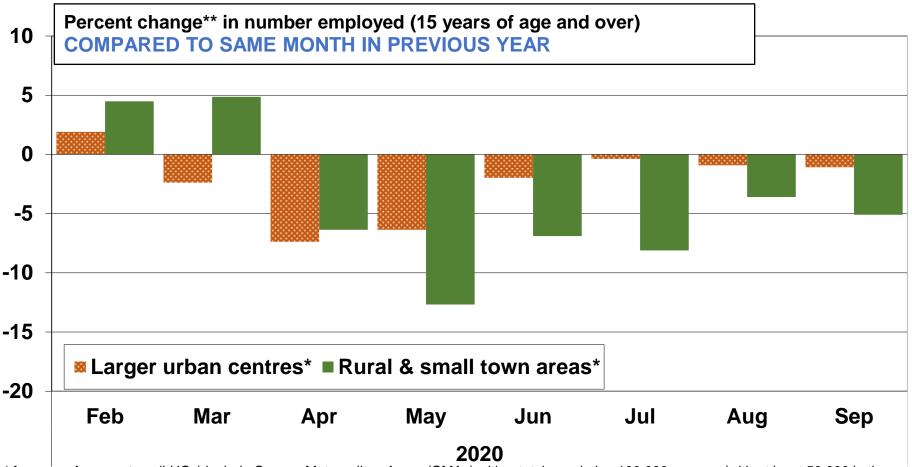

^{*} Larger urban centres (LUCs) include Census Metropolitan Areas (CMAs) with a total population 100,000 or more (with at least 50,000 in the urban core) and Census Agglomerations with a population of 10,000 to 99,999 and both include residents of neighbouring towns and municipalities where 50+% of employed residents commute to the CMA or CA.

^{*} Rural & small town (RST) individuals reside outside a CMA or CA.

^{**} Percent change is calculated as the difference in the longarithm of employment, times 100. Source: Statistics Canada. Labour Force Survey. Table 14-10-0107-01.

Health care and social assistance

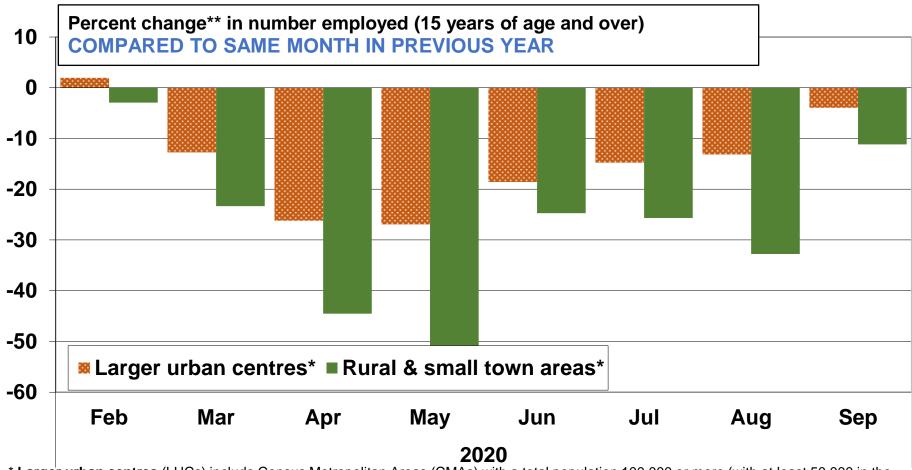

^{*} Larger urban centres (LUCs) include Census Metropolitan Areas (CMAs) with a total population 100,000 or more (with at least 50,000 in the urban core) and Census Agglomerations with a population of 10,000 to 99,999 and both include residents of neighbouring towns and municipalities where 50+% of employed residents commute to the CMA or CA.

^{*} Rural & small town (RST) individuals reside outside a CMA or CA.

^{**} Percent change is calculated as the difference in the longarithm of employment, times 100. Source: Statistics Canada. Labour Force Survey. Table 14-10-0107-01.

Information, culture and recreation

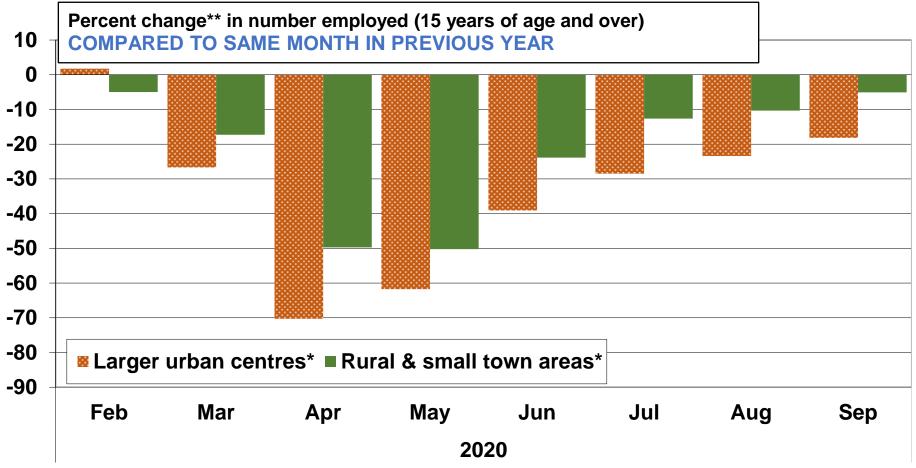

^{*} Larger urban centres (LUCs) include Census Metropolitan Areas (CMAs) with a total population 100,000 or more (with at least 50,000 in the urban core) and Census Agglomerations with a population of 10,000 to 99,999 and both include residents of neighbouring towns and municipalities where 50+% of employed residents commute to the CMA or CA.

^{*} Rural & small town (RST) individuals reside outside a CMA or CA.

^{**} Percent change is calculated as the difference in the longarithm of employment, times 100. Source: Statistics Canada. Labour Force Survey. Table 14-10-0107-01.

Accommodation and food services

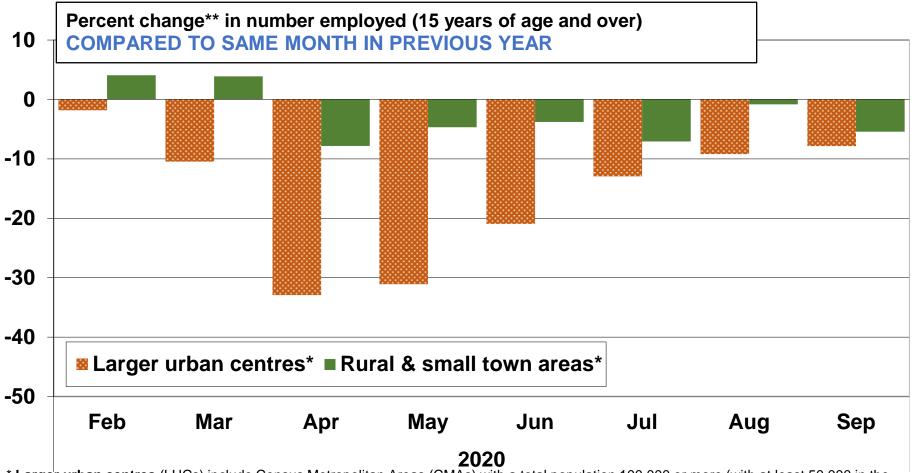

^{*} Larger urban centres (LUCs) include Census Metropolitan Areas (CMAs) with a total population 100,000 or more (with at least 50,000 in the urban core) and Census Agglomerations with a population of 10,000 to 99,999 and both include residents of neighbouring towns and municipalities where 50+% of employed residents commute to the CMA or CA.

^{*} Rural & small town (RST) individuals reside outside a CMA or CA.

^{**} Percent change is calculated as the difference in the longarithm of employment, times 100. Source: Statistics Canada. Labour Force Survey. Table 14-10-0107-01.

Other (personal) services

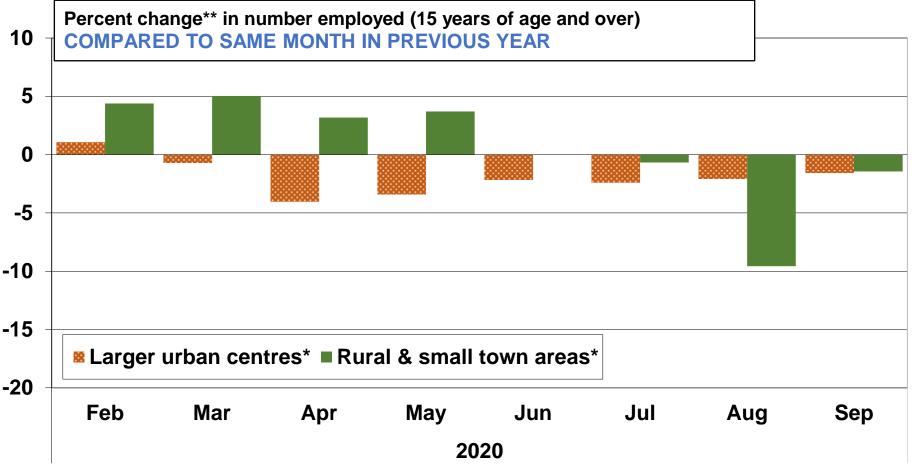

^{*} Larger urban centres (LUCs) include Census Metropolitan Areas (CMAs) with a total population 100,000 or more (with at least 50,000 in the urban core) and Census Agglomerations with a population of 10,000 to 99,999 and both include residents of neighbouring towns and municipalities where 50+% of employed residents commute to the CMA or CA.

^{*} Rural & small town (RST) individuals reside outside a CMA or CA.

^{**} Percent change is calculated as the difference in the longarithm of employment, times 100. Source: Statistics Canada. Labour Force Survey. Table 14-10-0107-01.

Public administration

^{*} Larger urban centres (LUCs) include Census Metropolitan Areas (CMAs) with a total population 100,000 or more (with at least 50,000 in the urban core) and Census Agglomerations with a population of 10,000 to 99,999 and both include residents of neighbouring towns and municipalities where 50+% of employed residents commute to the CMA or CA.

^{*} Rural & small town (RST) individuals reside outside a CMA or CA.

^{**} Percent change is calculated as the difference in the longarithm of employment, times 100. Source: Statistics Canada. Labour Force Survey. Table 14-10-0107-01.

^{1.} For examples of the types of businesses classified to each industry sector, see Statistics Canada. (2017) North American Industry Classification System: 2017 (Ottawa: Statistics Canada, Catalogue no. 12-501) (http://www5.statcan.gc.ca/olc-cel/olc.action?objld=12-501-X&objType=2&lang=en&limit=0).

Source: Statistics Canada. Labour Force Survey, Table 14-10-0107-01.

^{2.} Larger urban centres (LUCs) include Census Metropolitan Areas (CMAs) with a total population 100,000 or more (with at least 50,000 in the urban core) and Census Agglomerations with a population of 10,000 to 99,999 and both include residents of neighbouring towns and municipalities where 50+% of employed residents commute to the CMA or CA. Rural & small town (RST) individuals reside outside a CMA or CA.

COVID-19 Impact: Gap in PERCENT employed: By province compared to same month in previous year in

LUC: Larger urban centres and RST: Rural and small town areas

 In September, 2020, the three provinces with the largest RST COVID-19 impact or gap in terms of the PERCENT difference in employment, compared to September, 2019, were:

1. - 19.3% : Alberta

2. - 10.9% : Quebec

3. - 9.4% : Saskatchewan

4. - 7.0%: British Columbia

• Details of number employed by industry sector are in slides 13-14-15, details on percent change in number employed by industry sector are in slides 35-36-37, details by province are in slide 51 and details by age and sex are in slide 66.

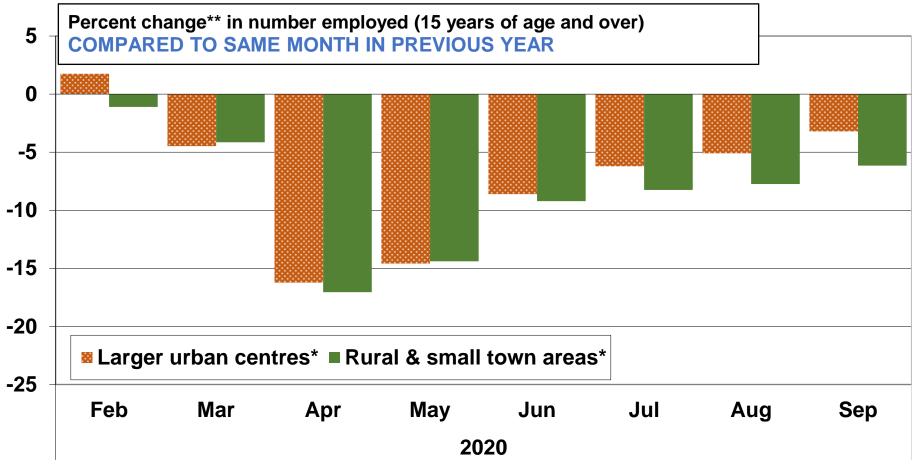

Which province recorded the largest PERCENT decline in rural and small town (RST 1) employment from September, 2019 to September, 2020?

^{1.} Larger urban centres (LUCs) include Census Metropolitan Areas (CMAs) with a total population 100,000 or more (with at least 50,000 in the urban core) and Census Agglomerations with a population of 10,000 to 99,999 and both include residents of neighbouring towns and municipalities where 50+% of employed residents commute to the CMA or CA. Rural & small town (RST) individuals reside outside a CMA or CA.

COVID-19 Impact: Gap in PERCENT employed: By sex compared to same month in previous year in

LUC: Larger urban centres and RST: Rural and small town areas

- ➤ In September, 2020, the employment PERCENT gap by sex, compared to September, 2019, showed:
- For males, the RST gap was (somewhat) larger than the LUC gap;
- For females, the RST gap was (somewhat) larger than the LUC gap;
- Thus, for each sex, the COVID-19 impact was essentially the same for males and females (i.e. each reported a larger COVID-10 impact in RST areas compared to the situation in LUCs).
- Details of number employed by industry sector are in slides 13-14-15, details on percent change in number employed by industry sector are in slides 35-36-37, details by province are in slide 51 and details by age and sex are in slide 66.

Percent change in MALE employment, Canada: Compared to same month in previous year

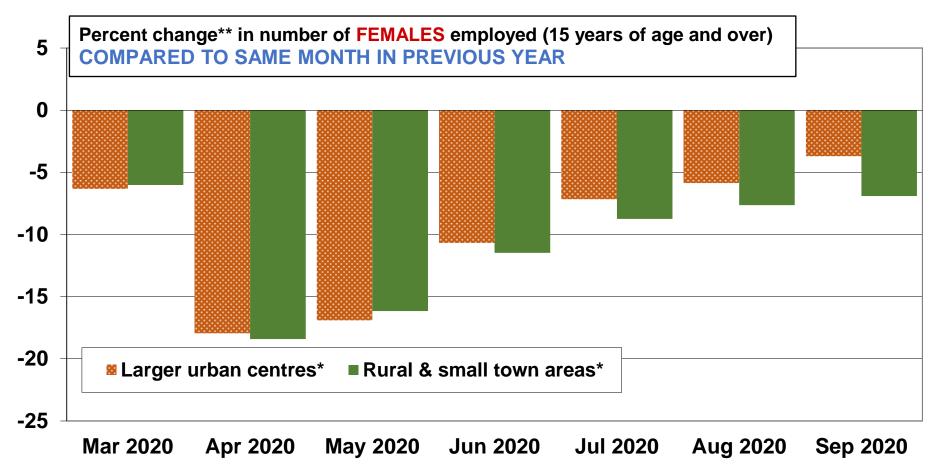

^{*} Larger urban centres (LUCs) include Census Metropolitan Areas (CMAs) with a total population 100,000 or more (with at least 50,000 in the urban core) and Census Agglomerations with a population of 10,000 to 99,999 and both include residents of neighbouring towns and municipalities where 50+% of employed residents commute to the CMA or CA.

^{*} Rural & small town (RST) individuals reside outside a CMA or CA.

^{**} Percent change is calculated as the difference in the longarithm of employment, times 100. Source: Statistics Canada. Labour Force Survey. Table 14-10-0107-01.

Percent change in **FEMALE employment**, Canada: Compared to same month in previous year

^{*} Larger urban centres (LUCs) include Census Metropolitan Areas (CMAs) with a total population 100,000 or more (with at least 50,000 in the urban core) and Census Agglomerations with a population of 10,000 to 99,999 and both include residents of neighbouring towns and municipalities where 50+% of employed residents commute to the CMA or CA.

^{*} Rural & small town (RST) individuals reside outside a CMA or CA.

^{**} Percent change is calculated as the difference in the longarithm of employment, times 100. Source: Statistics Canada. Labour Force Survey. Table 14-10-0107-01.

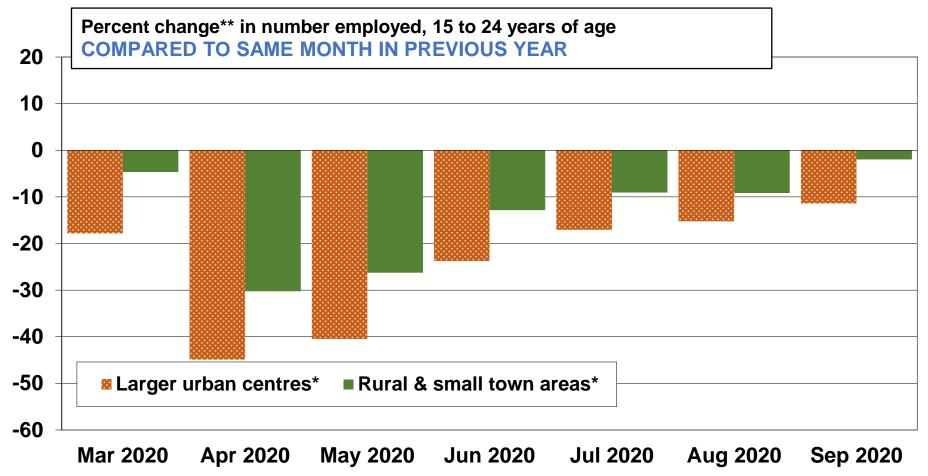

COVID-19 Impact: Gap in PERCENT employed: By age compared to same month in previous year in

LUC: Larger urban centres and RST: Rural and small town areas

> In September, 2020, the employment PERCENT gap by age, compared to September, 2019, showed:

- For individuals 15-24 years of age, the RST gap was less than LUC.
- For individuals in the core-age workforce, 25-54 years of age, the RST gap was wider than the LUC gap.
- For individuals 55 to 64 years of age, the RST gap remained much wider than the LUC gap.
- For individuals 65+ years of age, the RST gap was smaller, compared to the LUC gap.
- Thus, in September, 2020, the RST gap was greater than the LUC gap for individuals 25 to 64, but less for individuals 15-24 and 65+ years of age.
- Details of number employed by industry sector are in slides 13-14-15, details on percent change in number employed by industry sector are in slides 35-36-37, details by province are in slide 51 and details by age and sex are in slide 66.

Percent change in employment for individuals 15 to 24 years of age: Compared to same month in previous year, Canada

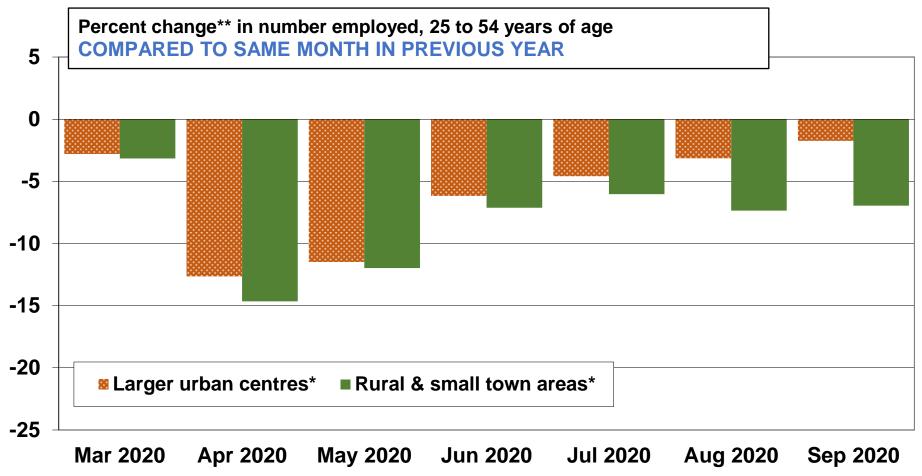

^{*} Larger urban centres (LUCs) include Census Metropolitan Areas (CMAs) with a total population 100,000 or more (with at least 50,000 in the urban core) and Census Agglomerations with a population of 10,000 to 99,999 and both include residents of neighbouring towns and municipalities where 50+% of employed residents commute to the CMA or CA.

^{*} Rural & small town (RST) individuals reside outside a CMA or CA.

^{**} Percent change is calculated as the difference in the longarithm of employment, times 100. Source: Statistics Canada. Labour Force Survey. Table 14-10-0107-01.

Percent change in employment for individuals 25 to 54 years of age: Compared to same month in previous year, Canada

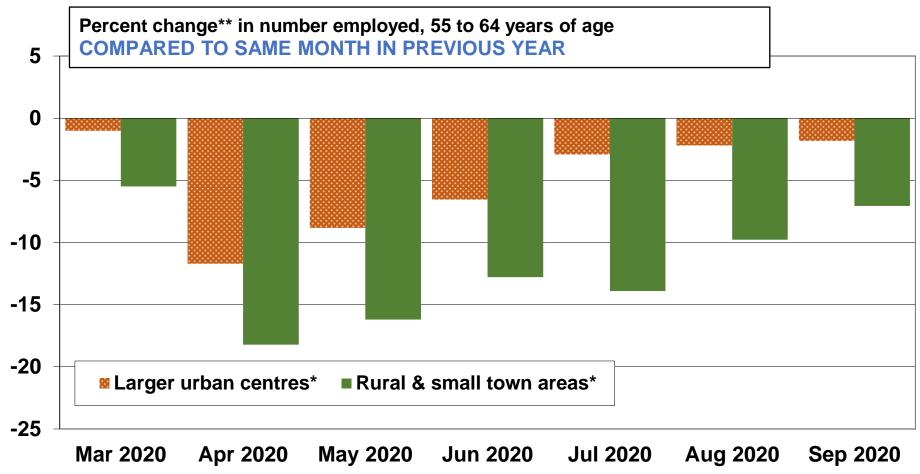

^{*} Larger urban centres (LUCs) include Census Metropolitan Areas (CMAs) with a total population 100,000 or more (with at least 50,000 in the urban core) and Census Agglomerations with a population of 10,000 to 99,999 and both include residents of neighbouring towns and municipalities where 50+% of employed residents commute to the CMA or CA.

^{*} Rural & small town (RST) individuals reside outside a CMA or CA.

^{**} Percent change is calculated as the difference in the longarithm of employment, times 100. Source: Statistics Canada. Labour Force Survey. Table 14-10-0107-01.

Percent change in employment for individuals 55 to 64 years of age: Compared to same month in previous year, Canada

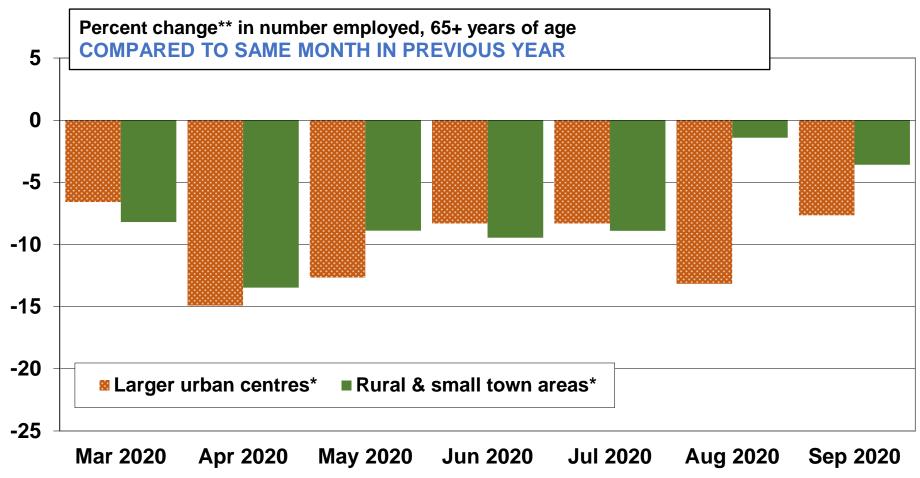

^{*} Larger urban centres (LUCs) include Census Metropolitan Areas (CMAs) with a total population 100,000 or more (with at least 50,000 in the urban core) and Census Agglomerations with a population of 10,000 to 99,999 and both include residents of neighbouring towns and municipalities where 50+% of employed residents commute to the CMA or CA.

^{*} Rural & small town (RST) individuals reside outside a CMA or CA.

^{**} Percent change is calculated as the difference in the longarithm of employment, times 100. Source: Statistics Canada. Labour Force Survey. Table 14-10-0107-01.

Percent change in employment for individuals 65+ years of age: Compared to same month in previous year, Canada

^{*} Larger urban centres (LUCs) include Census Metropolitan Areas (CMAs) with a total population 100,000 or more (with at least 50,000 in the urban core) and Census Agglomerations with a population of 10,000 to 99,999 and both include residents of neighbouring towns and municipalities where 50+% of employed residents commute to the CMA or CA.

^{*} Rural & small town (RST) individuals reside outside a CMA or CA.

^{**} Percent change is calculated as the difference in the longarithm of employment, times 100. Source: Statistics Canada. Labour Force Survey. Table 14-10-0107-01.

COVID-19 Impact: Gap in PERCENT employed:

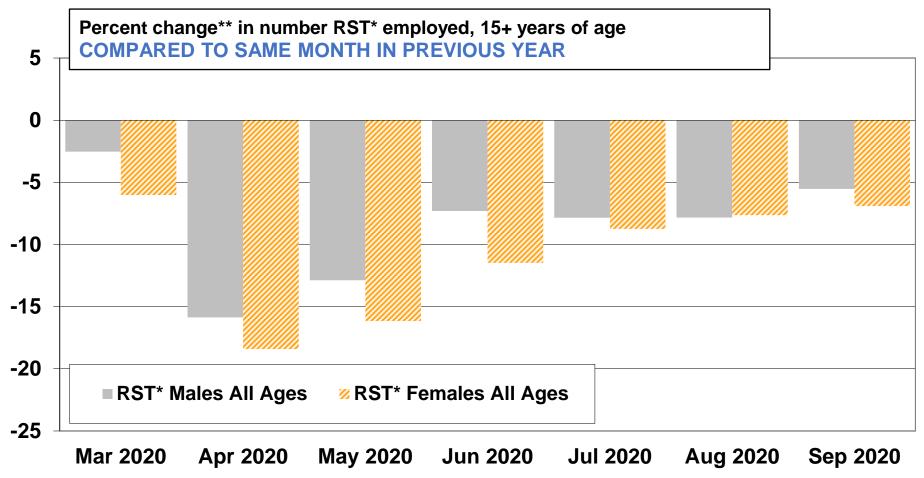

By age and sex (i.e. Is there an RST SHE-cession?) compared to same month in previous year

in RST: Rural and small town areas

> In September, 2020 within rural and small (RST) areas, a review of the male – female employment gap, compared to September, 2019, showed:

- Overall, the gap in RST areas was slightly larger (-6.9%) for females compared to the gap for males (-5.5%).
- The employment gap between females and males in RST areas was (very) similar in the age groups from 15 to 54 years of age
- But, within RST areas the female gap was significantly larger than male gap for 55+ years of age.
- Thus, in September, 2020, our measure of the gap shows an RST "SHE-cession" for females 55+ years of age.
- Details of number employed by industry sector are in slides 13-14-15, details on percent change in number employed by industry sector are in slides 35-36-37, details by province are in slide 51 and details by age and sex are in slide 66.

Percent change in employment for RST* individuals, 15+ years of age: Compared to same month in previous year, Canada

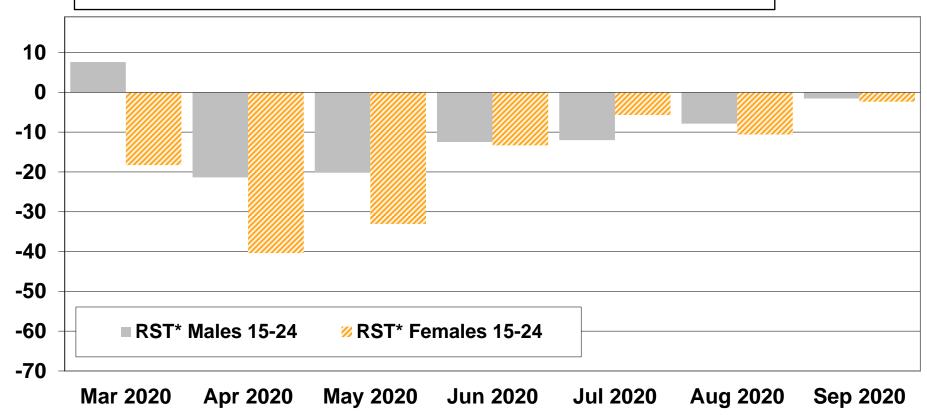

^{*} Larger urban centres (LUCs) include Census Metropolitan Areas (CMAs) with a total population 100,000 or more (with at least 50,000 in the urban core) and Census Agglomerations with a population of 10,000 to 99,999 and both include residents of neighbouring towns and municipalities where 50+% of employed residents commute to the CMA or CA.

^{*} Rural & small town (RST) individuals reside outside a CMA or CA.

^{**} Percent change is calculated as the difference in the longarithm of employment, times 100. Source: Statistics Canada. Labour Force Survey. Table 14-10-0107-01.

Percent change in employment for RST* individuals 15-24 years of age: Compared to same month in previous year, Canada

^{1.} Larger urban centres (LUCs) include Census Metropolitan Areas (CMAs) with a total population 100,000 or more (with at least 50,000 in the urban core) and Census Agglomerations with a population of 10,000 to 99,999 and both include residents of neighbouring towns and municipalities where 50+% of employed residents commute to the CMA or CA. Rural & small town (RST) individuals reside outside a CMA or CA.

^{2.} Percent change is calculated as the difference in logarithms, times 100. Source: Statistics Canada. Labour Force Survey. Table 14-10-0105-01.

Context: Recent employment trends by industry

- The objective of these charts is to provide 5 years of historical context to the LUC and RST employment trends in each industry.
 - Specifically:
 - The trend in recent years; and
 - The month-to-month variability in the published estimates
- In the charts, the LUC data are plotted using the LHS = left-hand scale and the RST data are plotted using the RHS = right-hand scale.

Employment in rural and small town Canada was 2.55 million in September, 2020

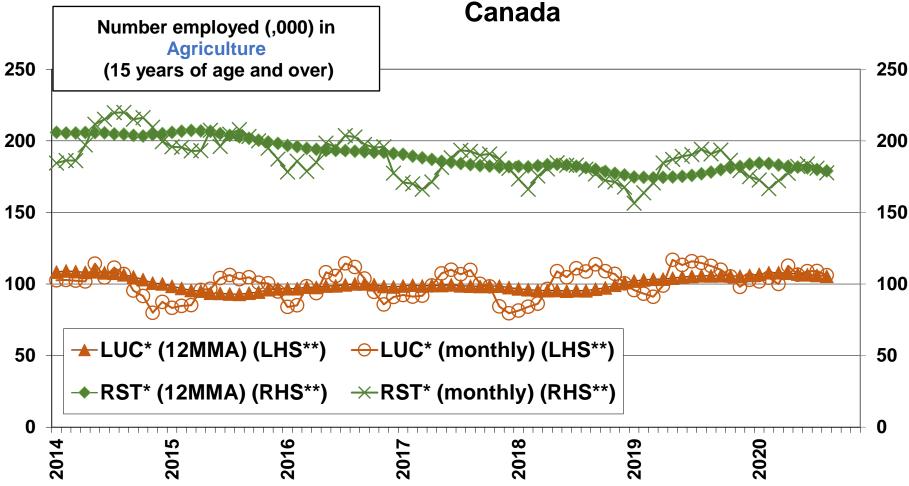

^{*}Larger urban centres (LUCs) include Census Metropolitan Areas (CMAs) with a total population 100,000 or more (with at least 50,000 in the urban core) and Census Agglomerations with a population of 10,000 to 99,999 and both include residents of neighbouring towns and municipalities where 50+% of employed residents commute to the CMA or CA.

Context: Recent month-to-month change

- Note that
 - RST fell less than LUC from February to March;
 - RST fell more than LUC from March to April;
 - RST increased more than LUC from April to May;
 - RST increased the same as LUC from May to June;
 - RST increased less than LUC from June to July;
 - RST increased less than LUC from July to August;
 - RST increased less than LUC from August to September.

Percent change in employment, Canada: Month to month percent change in number employed

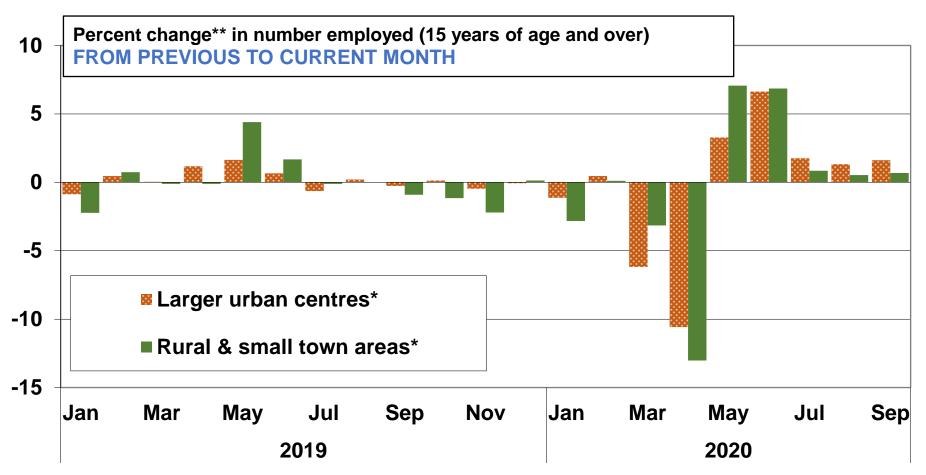

^{*} Larger urban centres (LUCs) include Census Metropolitan Areas (CMAs) with a total population 100,000 or more (with at least 50,000 in the urban core) and Census Agglomerations with a population of 10,000 to 99,999 and both include residents of neighbouring towns and municipalities where 50+% of employed residents commute to the CMA or CA.

^{*} Rural & small town (RST) individuals reside outside a CMA or CA.

^{**} Percent change is calculated as the difference in the longarithm of employment, times 100. Source: Statistics Canada. Labour Force Survey. Table 14-10-0107-01.

Percent change in employment, Canada: Month-to-month percent change in number employed

Context: Size of rural economy

- Canada's rural economy makes a significant contribution to the GDP in each province. See:
 - Bollman (2019) Charts of Levels and Trends: Metro and Non-metro Gross Domestic Product (GDP), Canada and Provinces, 2009 to 2016
 which I can send along upon request.

•

Context: Notes

- My Canada-level powerpoint charts and tables for the LFS data for April, May, June, July and August, 2020, along with a special issues of "Focus on Rural Ontario" entitled "COVID-19 Impact on Rural Employment: Ontario in the Canadian context" for each of April, May, June, July and August, 2020 can be accessed via blogs at the Rural Ontario Institute https://www.ruralontarioinstitute.ca/blog/
- I will be submitting a blog with similar material based on the LFS data for September, 2020.
- Numerous Statistics Canada reports on the impact of COVID-19 are available as Catalogue no. 45-28-0001 (https://www150.statcan.gc.ca/n1/en/catalogue/45280001)
- The monthly report of the LFS results are published as part of the Statistics Canada publication called THE DAILY. The easiest way to find the (lengthy and comprehensive) report is to use Google to search for "The Daily – Labour Force Survey, September 2020" (and similarly, for the report for any other month).

Canadian composite economic indicator July 2020⁷

1-month percentage change

	Jan	Feb	Mar	Apr	May	Jun	Jul	Cumul ²
Canada	-0.6	0.3	-3.3	-8.5	2.0	4.6	2.2	-3.5
Atlantic Canada	-0.7	0.1	-3.1	-7.2	3.4	4.9	1.6	-0.9
Newfoundland and Labrador	-1.3	0.4	-2.7	-7.4	3.2	4.6	1.7	-1.1
Prince Edward Island	-0.6	0.8	-3.7	-6.1	8.4	3.6	-0.7	0.8
Nova Scotia	-1.1	0.0	-3.3	-6.6	1.6	5.7	1.8	-1.3
New Brunswick	0.2	-0.3	-3.3	-8.1	4.9	4.8	1.8	-0.5
Central Canada	-0.2	0.0	-4.1	-9.6	2.8	5.5	2.1	-4.0
Quebec	0.6	-0.4	-4.0	-9.4	5.9	4.9	1.7	-1.7
Ontario	-0.6	0.2	-4.1	-9.7	1.3	5.8	2.2	-5.1
Western Canada	-1.2	0.7	-2.2	-7.0	0.4	3.1	2.4	-3.6
Manitoba	0.4	0.8	-2.0	-8.4	1.4	3.7	2.5	-3.2
Saskatchewan	0.3	0.9	2.9	7.3	0.3	-4.3	-3.1	2.7
Alberta	-1.7	0.1	-2.1	-8.3	-0.6	3.5	3.5	-4.4
British Columbia	-1.5	1.3	-3.9	-9.2	1.3	4.7	2.7	-5.0

¹ Based on about 60 seasonally-adjusted and price-deflated monthly economic time series such as LFS unemployment and participation rates; LFS hours worked by industry; SEPH employment by industry; retail, wholesale, manufacturing and restaurant sales; international trade; housing starts; building permits; electric power generation; average weekly earnings; and CPI relative prices for eight product groups. The monthly percentage changes of these series are weighted by coefficients associated with the first principal component. The resulting composite index accounts for between 15% (PE) and 31% (ON) of the variance in each province. Some provinces have much lower signal-to-noise ratios, but the method still seems to identify the overall economic trend quite well.

@PhilSmith26

² Cumulative percentage change from March to July, that is July versus February, before the COVID-19 shutdown began.

Employment in rural and small town areas in the months BCE

(before Covid era or before coma economy)

and in the months CE

(Covid era or coma economy)
