Employment in rural and small town areas in the months BCE (before Covid era or before coma economy) and in the months CE (Covid era or coma economy)

Selected charts up to April, 2020

May 8, 2020 Ray D. Bollman RayD.Bollman@sasktel.net Research Associate, Rural Development Institute, Brandon University Professional Associate, Leslie Harris Centre of Regional Policy and Development, Memorial University

Employment in rural and small town areas

- A. <u>Key findings</u>
- B. <u>Definitions</u>
- C. Canada: 3 measures of number & change in number employed
 - 1. Trends and change using a 12-month moving average
 - 2. <u>Change comparing a given month to the average for the</u> <u>same month in the three previous years</u>
 - 3. <u>Change on a month-to-month basis</u>
- C. Change in number employed by province
- D. <u>Change in number employed by industry sector</u>
- E. Percentage point change in employment rates by age and sex
- F. <u>Context</u>

Key findings:

Trends and change in employment in LUC: Larger urban centres and RST: Rural and small town areas

- From Feb to Apr 2020, the RST job loss was 382,000
- The rate of decline in RST employment from Feb to Apr 2020 was essentially the same in RST (-16.2%) as in LUCs (-16.8%).
- The RST industry sectors with the largest decline in number employed were:
 - Retail and wholesale trade, down 63,000 jobs;
 - Accommodation and food, down 55,000 jobs; and
 - Manufacturing, down 45,000 jobs.
- The RST sectors with the largest PERCENT decline in employment were:
 - Accommodation and food, down 50.1%;
 - Information, culture and recreation, down 43.7%;and
 - Forestry, fishing, mining, oil and gas, down 23.5%.
- The provinces with the largest RST PERCENT decline in employment were:
 - Quebec, down 26.6%;
 - British Columbia, down 17.6%; and
 - New Brunswick, down 16.7%
- From Feb to Apr 2020 in the employment rate (i.e. the percent employed in each age group):
 - Declined less in RST in (almost) every age and sex group, compared to LUCS; and
 - Within RST, the decline in the employment rate was greater for females.

Definitions

Labour Force Survey (LFS)

- 1. Data on employment from the monthly LFS during the third of April, 2020 was published on May 8, 2020.
- 2. Number employed: Number of persons who, during the reference week, worked for pay or profit, or performed unpaid family work or had a job but were not at work due to own illness or disability, personal or family responsibilities, labour dispute, vacation, or other reason. Those persons on layoff and persons without work but who had a job to start at a definite date in the future are not considered employed. Estimates in thousands, rounded to the nearest hundred.
- 3. The LFS rotates 1/6 of its sample every month. The data for the first month is typically collected via a face-to-face household interview but, for March, 2020, this was changed to a telephone (or maybe Internet) data collection approach.
- 4. Rural and small town areas are defined in the next slide.

Larger urban centres (LUCs) include Census Metropolitan Areas (CMAs) with a total population 100,000 or more (with at least 50,000 in the urban core) and Census Agglomerations with a population of 10,000 to 99,999 and both include residents of neighbouring towns and municipalities where 50+% of employed residents commute to the CMA or CA.

Rural & small town (RST) individuals reside outside a CMA or CA.

The current LFS data are published using the 2011 delineation of CMAs and CAs. The CMAs are listed on the next slide and the CAs are listed on the slide that follows the slide with the list of CMAs.

(Note that CAs with a total population of 100,000 or more are not classified as CMAs because they have fewer than 50,000 residents in the core.)

Province	Metro areas (CMAs) within each province		Population in 2011 Census		
Newfoundland and Labrador	St. John's	181,113	196,966	205,955	
Prince Edward Island	There are no CMAs in PEI				
Nova Scotia	Halifax	372,858	390,328	403,390

Metro refers to Census Metropolitan Areas (CMAs) which have a total population 100,000 or more (with at least 50,000 in the urban core) and includes all neighbouring towns and municipalities where 50+% of employed residents commute to the CMA.

Non-metro refers to individuals who live outside a CMA.

The current LFS data is based on the 2011 delineation of CMAs.

Labour Force Survey (LFS)

- 1. Employment change may be shown in various ways:
 - a. To remove the month-to-month variability and the season-to-season variability in the data, we first use a 12-month moving average (12MMA) and compare the calculated 12MMA level of employment in each month with the 12MMA level of employment in the same month in the previous year. This clearly illustrates non-metro job recessions (with a lag) compared to the incidence of job recessions in metro areas.
 - b. To enable a more sensitive calculation, we then compared the level of employment in a given month with the average level of employment in the previous three years (e.g., level of employment in April, 2020 is compared to the level of employment averaged over April, 2017 and April, 2018 and April, 2019).
 - c. A comparison of the month-to-month levels of employment is shown but the variability is large due to the inherent variability of monthly LFS estimates and the month-to-month variability introduced by seasonal fluctuations in employment.

Trends and change using a 12-month moving average in LUC: Larger urban centres and RST: Rural and small town areas

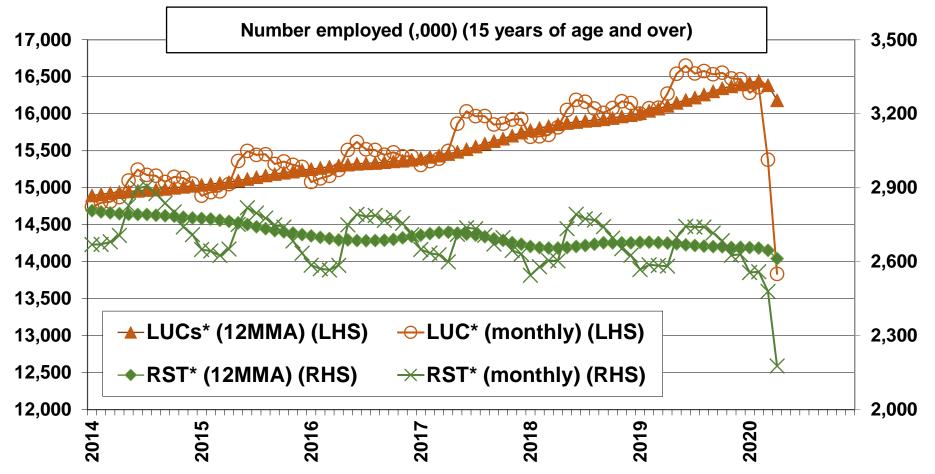

- Feb 2020 12MMA LUC employment 16.44 million
- Mar 2020 12MMA LUC employment 16.39 million
- Apr 2020 12MMA LUC employment 16.18 million
- Feb 2020 12MMA RST employment 2.66 million
- Mar 2020 12MMA RST employment 2.65 million
- Apr 2020 12MMA RST employment 2.61 million
- Percent change (using difference of logs) compared to same month in previous year (using 12MMA):
 - Feb 2019 to Feb 2020 LUC = +2.5%
 - Mar 2019 to Mar 2020 LUC = +1.9%
 - Apr 2019 to Apr 2020 LUC = +0.5%
 - Feb 2019 to Feb 2020 RST = -0.9%
 - Mar 2019 to Mar 2020 RST = -1.2%
 - Apr 2019 to Apr 2020 RST = -2.4%

Employment in rural and small town Canada has varied around 2.7 million since 2001

*Larger urban centres (LUCs) include Census Metropolitan Areas (CMAs) with a total population 100,000 or more (with at least 50,000 in the urban core) and Census Agglomerations with a population of 10,000 to 99,999 and both include residents of neighbouring towns and municipalities where 50+% of employed residents commute to the CMA or CA. *Rural & small town (RST) individuals reside outside a CMA or CA. Employment in accommodation and food services in rural and small town Canada: down 53.4% in April 2020

* Larger urban centres (LUCs) include Census Metropolitan Areas (CMAs) with a total population 100,000 or more (with at least 50,000 in the urban core) and Census Agglomerations with a population of 10,000 to 99,999 and both include residents of neighbouring towns and municipalities where 50+% of employed residents commute to the CMA or CA.

* Rural & small town (RST) individuals reside outside a CMA or CA.

** Percent change is calculated as the difference in the longarithm of employment, times 100.

1. For examples of the types of businesses classified to each industry sector, see Statistics Canada. (2017) North American Industry Classification System: 2017 (Ottawa: Statistics Canada, Catalogue no. 12-501) (http://www5.statcan.gc.ca/olc-cel/olc.action?objld=12-501-X&objType=2&lang=en&limit=0).

2. Larger urban centres (LUCs) include Census Metropolitan Areas (CMAs) with a total population 100,000 or more (with at least 50,000 in the urban core) and Census Agglomerations with a population of 10,000 to 99,999 and both include residents of neighbouring towns and municipalities where 50+% of employed residents commute to the CMA or CA. Rural & small town (RST) individuals reside outside a CMA or CA.

Source: Statistics Canada. Labour Force Survey, Table 14-10-0107-01.

Percentage point change in employment rate by age and sex, Canada

in

LUC: Larger urban centres and RST: Rural and small town areas

- The employment rate (ER) is the percent of the population in a given age group that is employed
- Employment rate (ER) (for the population 15+ years of age)
 - LUC: Feb = 61.8% Apr = 52.1% Change = -9.7 percentage points
 - RST: Feb = 56.2% Apr = 48.2% Change = -8.0 percentage points
- In the core working age group (25-54 years of age), the ER declined slightly more in RST (-10.5 percentage points) than in LUCs (-10.2 percentage points.
- ER in RST declined more for females than males in each age group
- Compared to "expected" (i.e. compared to average for same month in three previous years):
 - ER declined less in RST than in LUC
 - except for a slighter greater decline for the 55-64 year age group
 - due to a larger decline in the ER for RST males

Context

- Canada's rural population is growing, but not everywhere. The rural population is growing near cities, in cottage country and in the north. Data for the rural and small town population are shown in
 - Bollman, Ray D. (2017) Rural Demographic Update: 2016 (Guelph: Rural Ontario Institute) (<u>http://www.ruralontarioinstitute.ca/file.aspx?id=26acac18-6d6e-4fc5-8be6-c16d326305fe</u>).
- Canada's rural economy makes a significant contribution to the GDP in each province. See:
 - Bollman (2019) Charts of Levels and Trends: Metro and Non-metro Gross Domestic Product (GDP), Canada and Provinces, 2009 to 2016

which I can send along upon request.
